Education

University of Waterloo Sep. 2022 – Apr. 2027

Bachelor of Applied Science, Honours Electrical Engineering, Mechatronics Option

Relevant Courses: Data Structures and Algorithms (**C++**), Electronic Circuits, Electromechanical Energy Conversion, Digital Circuits and Computers (**VHDL** and **ARM**), Project Studio (**C** and **Hardware**).

Professional Experience

Electrical Design Team Lead Sep. 2024 – Present

Baja Sae *Waterloo, ON*

- Designed a **voltage step-down board**, converting **18V to 12V** to safely power an off-road vehicle's **electrical systems, including lighting** and **a differential**.
- Developed a **custom PCB** using **Altium** to integrate an **STM32 microcontroller** with **peripherals**, including an **accelerometer sensor, SD card mount,** and **LCD display**.
- Programmed algorithms using **C** to **collect and process accelerometer data**, enabling precise vehicle performance analysis using an **STM32 microcontroller**.

Firmware Engineering Intern May. 2024 – Aug. 2024

WeTraq *Markham, ON*

- Collaborated with a team of **4 senior firmware engineers** to develop, and optimize firmware for an activity tracking device using **C++** in **STM32CubeIDE** and **SmartGit**, delivering the product within **4 months**.
- Implemented and integrated **I2C, UART,** and **SPI communication protocols** to develop peripheral drivers, including for **Pedometer, Bluetooth,** and **Radio Frequency modules**.
- Tested and validated **sensor functionality**, leading to performance optimizations and achieving over **90% accuracy** in sensor data readings.

Electrical Engineering Intern Sep. 2023 – Dec. 2023

Ekidna Sensing *Ottawa, ON*

- Led a **multidisciplinary team of 5** mechanical, data, and nano engineers to design and validate a Moisture Analyzer that uses an **embedded microcontroller** to **measure humidity** and **export data as a CSV file**.
- Engineered a Moisture Analyzer in **Altium** to use an **RP2040 chip, SHT33 temp,** and **humidity sensor**, while optimizing the design to include a **USB-C port** for better compatibility.
- Utilized Visual Studio Code to write **Python** scripts for reading data from the Moisture Analyzer and **mapping functions** to the results for analyzing accuracy and predicting future trends.

Hardware Projects

Digital Timer PCB Sep. 2024

- Developed a **digital timer circuit** that counts down from a manually inputted value, via a **DIP switch**, and displays elapsed time using a **seven-segment display**, with a buzzer indicating when the count is finished.
- Designed schematics using **Altium** and integrated components such as a **BCD counter, quad NOR gate, dual D flip-flop,** and a **MOSFET**, then assembled the **PCB** using surface-mount and through-hole soldering techniques.
- Tested and debugged the **timer circuit**, utilizing **Proteus simulations** alongside lab instruments such as a **digital multimeter** and **oscilloscope** to ensure proper functionality and troubleshoot short-circuit issues on the **PCB**.

Technical Skills

Hardware: STM32, Arduino, Raspberry Pi, JTAG, FPGA, Soldering, 3D Printing.
Design Tools: Altium, Keil μVision, Quartus Prime, Proteus, SolidWorks.
Languages: C/C++, Python, Java, VHDL, Assembly, MATLAB.
Developer Tools: Git, SmartGit, VS Code, STM32CubeIDE, Putty.
Protocols: USB, I2C, UART, SPI, NFC, WIFI.

Awards

Kelvyn Lo Memorial Scholarship Mar. 2022

- Awarded a scholarship of **$8,250** for being a top-performing student entering Electrical Engineering.
